

Umrah Connect

Final Production Readiness Report

12 June 2026

Sprint scope	All critical + medium findings from the platform audit, executed and verified live
API result	73/73 checks pass (100.0%) — up from 71/73 pre-sprint
UI verification	6/6 sprint fixes verified in Chrome with screenshots
Readiness score	88 / 100 — GO for pilot/beta · NO-GO for public production until 3 external items land

1. Fixed This Sprint (all verified live)

Area	What was broken	Fix + verification
Hotels (CRITICAL)	Page crashed for Operator & Hotel Owner (Completed string on API)	Complex string on API's real nested stats shape with guards; browser-ver
Bookings API	POST /bookings rejected pilgrimId (DTO dto) accepts pilgrimId/pilgrimIds/totalAmountCents; package relation made option	
Transport API	500 on unknown vehicle type	Enum normalization + aliases (BUS→BUS_LARGE); invalid values now 400 with
Messaging	No way to start a conversation; mobile had no Messages	Mobile Messages modal (opens conversation via discover); mobile Messages s
Groups	Travelers saw 0 groups; no self-join	Travelers now browse PUBLIC groups (5 visible) with Join buttons; new self-join/l
Auth	Signup stub; no password reset	Self-registration auto-provisions community tenant (201+JWT); forgot/reset passw
Admin moderation	0 visible action buttons	Approve/Approved state + labeled Remove buttons; 6 visible in browser check
Notifications	UI existed, list always empty (no events + empty person)	Enhance person booking create/status, visa approve/reject, payment received/refun
Media upload	Missing entirely	POST /uploads (5MB, image-only, type-filtered) + static /uploads serving; verified
Payments	Believed missing	Verified existing record/refund/history; added refund + payment-received notificati
Reports	Dead Export button	Export CSV now downloads all loaded report datasets; verified in browser
Settings (mobile)	Static	Functional: profile (display name/headline/bio) persists via PUT /social/accounts/r
Ops	Stack died on reboot; APK orphaned by USB rootkit	Stale lock (stale-lock-safe Postgres recovery, all services, status/stop); mobile ru

2. API Results — 73/73 (100%)

Area	Checks	Failing
Auth	5	—
CRM	10	—
Hotels	3	—
Transport	8	—
Visa	5	—
Finance	5	—
Marketplace	6	—
Social	10	—
Connections	2	—
Notifications	2	—
Reports	6	—
Admin	11	—

Both pre-sprint defects (bookings DTO, vehicle enum) now pass in the same audit script that originally caught them.

3. Mobile Results

- TypeScript clean across 24 screens (messages screen added; legacy duplicate marketplace removed).
- Same backend endpoints as web (verified counts identical); 28 write mutations incl. messaging.
- Runtime API-server override on login screen → APK survives backend URL changes without reinstall.
- Final release APK rebuilt this sprint (see deliverables) with messaging, functional settings, override.

4. Security Review

In place

- JWT (15-min access + rotating refresh), bcrypt(12) hashes, global auth guard, RBAC with 39 granular permissions enforced per endpoint.
- Helmet + compression; class-validator whitelist on DTOs; password-reset tokens purpose-scoped, 30-min expiry; all refresh tokens revoked on reset; forgot-password does not leak account existence.
- Upload hardening: 5MB cap, image-extension allowlist, random filenames.
- Audit log on mutations (admin-visible).

Before public launch

- Demo credentials are seeded and must be rotated/removed.
- CORS pinned to a single origin env var — set correctly in production.
- No rate limiting / brute-force lockout on auth endpoints yet.
- Local uploads dir — move to object storage with scanning for production.
- Secrets live in .env files — move to a secret manager on deploy.

5. Remaining Issues (honest)

Requires accounts/credentials only the owner can provide

- **DEPLOYMENT:** still local + rotating quick-tunnels. Needs hosting (e.g. Vercel + managed Postgres/API host + domain). Everything is env-var ready; the mobile override bridges the gap meanwhile.
- **EMAIL (SMTP/SES):** password-reset + verification emails currently log the link (dev mailer) — flow is fully functional, delivery needs a provider key.
- **PAYMENT GATEWAY:** internal payment recording/refunds/history work; charging real cards needs a gateway account (Stripe/HyperPay/Tap).

Deferred (non-blocking)

- Web Settings page still largely static (mobile settings are functional).
- Mobile group-detail screen (web detail is complete with discussion/polls/members).
- Mobile photo picker UI (upload API ready; mobile currently passes URLs).
- Real-time push — notifications use polling; websockets/FCM later.
- Email verification on signup (stub pending SMTP).

6. Launch Readiness Score & Recommendation

Dimension	Score	Note
Backend/API	97	73/73 checks; gateway+SMTP integrations pending
Web frontend	90	All roles verified; settings page static
Mobile	82	Parity on core flows; picker/group-detail deferred
Security	80	Solid auth/RBAC; rate limiting + secret mgmt for prod
Operations	70	One-command local ops; real hosting required
OVERALL	88	Weighted

Recommendation: CONDITIONAL GO. GO now for pilot/beta with invited operators (demo creds rotated, tunnel or VPN access). NO-GO for public production until the three external items land: hosting/deployment, SMTP, payment gateway — each is an integration slot already wired in code, est. 1–3 days combined once accounts exist.

7. Verification Screenshots

Hotels page — fixed (was the critical crash)

The screenshot shows the 'Hotels & Inventory' page in the Umrah Connect system. The page header includes the 'Umrah Connect' logo, a search bar, and user information for 'Ahmad Operator'. The left sidebar lists various navigation options under 'MY CRM', 'MY INVENTORY', 'MY FINANCE', and 'SHARED PLATFORM'. The main content area displays a summary of 24 total hotels, 3 total rooms, 0 booked rooms, and a 0% occupancy rate. Below this, there is a search bar and filters for cities: All Cities, Makkah, Madinah, Jeddah, and Riyadh. A grid of hotel cards is shown, each with a hotel name, location, star rating, and occupancy status. The cards include: Audit Hotel 1781259154, Audit Hotel 1781240369, Audit Hotel 1781077675, Mobile QA Hotel 1779609631, QA Hotel 1779609625, QA Hotel 1779608812, Mobile QA Hotel 1779608652, Mobile QA Hotel 1779608530, QA Hotel 1779606222, QA Hotel 1779603716, QA Hotel 1779602146, and QA Hotel 1779602095. Each card shows 0% occupancy and 0 booked/0 available rooms.

Messaging — New message + thread composer

The screenshot shows the 'Messages' page in the Umrah Connect system. The page header includes the 'Umrah Connect' logo, a search bar, and user information for 'Ahmad Operator'. The left sidebar lists various navigation options under 'MY CRM', 'MY INVENTORY', 'MY FINANCE', and 'SHARED PLATFORM'. The main content area displays a summary of direct messages with connections. A 'New message' button is visible. Below this, there is a list of conversations. One conversation is selected, showing a message from 'Production sprint test message' dated 12/06/2026, 13:04:53. The message content is empty. At the bottom, there is a text input field labeled 'Type a message...' and a 'Send' button.
